

ANALYTICS SETUP & READINESS REPORT

Tracking is installed and firing on the live site. This report documents what is being measured, where the gaps are, and what to expect next. Visitor/traffic figures are intentionally omitted — collection only just began and no reporting data is yet available (see the data-honesty note).

Site **www.powerlinei.com**Prepared for **Marketing Team**Date **09 Jul 2026**

● Tracking live · data collection started 06 Jul 2026

01 STATUS AT A GLANCE

● LIVE

Google Analytics 4

Installed & firing

reporting API not connected

02 TRACKING SNAPSHOT

Of the 10 signals worth measuring on a lead-generation site, only 3 are captured today — the 6 that indicate an actual lead are not yet tracked.

■ 3 signals measured automatically (page views, scroll, outbound clicks)

■ 6 lead signals NOT tracked (3 forms, phone, email, CTA clicks)

■ 1 not applicable (no WhatsApp channel on the site)

03 THE DATA WINDOW

Analytics was added after the site was built, so nothing before 06 Jul 2026 was recorded. Only a few days of data exist — treat the next 2–4 weeks as a baseline period before reading trends.

04 WHAT IS BEING MEASURED

SIGNAL	STATUS	SOURCE
Page views	Tracked	GA4 + Vercel — automatic
Scroll depth (90%)	Auto	GA4 Enhanced Measurement
Outbound link clicks	Auto	GA4 Enhanced Measurement
Sales Request form submit	Not tracked	needs generate_lead
Supplier Offering form submit	Not tracked	needs generate_lead
Job application submit	Not tracked	needs generate_lead
Phone (tap-to-call) clicks	Not tracked	needs contact_call
Email (mailto) clicks	Not tracked	needs contact_email
Header CTA clicks	Not tracked	needs cta_click
WhatsApp clicks	N/A	no WhatsApp channel on the site

05 THE BLIND SPOT: LEADS

Right now the site counts page views — not leads.

Analytics cannot yet tell you how many visitors submitted a Sales Request, sent a Supplier Offering, applied for a job, tapped to call, or clicked to email — or which traffic source produced them. Adding the six events below turns visits into measurable outcomes and lets marketing attribute leads to campaigns.

EVENT TO ADD	FIRES WHEN	CONVERSION
generate_lead · sales_request	Sales Request form sent	Yes
generate_lead · supplier_offering	Supplier Offering form sent	Yes
generate_lead · job_application	Careers form sent	Yes
contact_call	Any phone link tapped	Yes
contact_email	Any email link clicked	Optional
cta_click	Header CTA clicked	Optional

06 PAGES BEING TRACKED

Home /	Who We Are /about	Our Products /our-products	Low Voltage /low-voltage
Medium Voltage /medium-voltage	Supplies /supplies	Product detail /products/...	Locations /locations
Sales Request /contact	Careers /careers	Suppliers /supplier-offerings	

07 RECOMMENDED ROADMAP

- 1 Add lead & interaction events** **THIS WEEK**
Implement the six events in 05 and mark the lead events as conversions in GA4 — the highest-value change; it makes the whole funnel measurable.
- 2 Let the baseline accumulate** **2–4 WEEKS**
Allow 2–4 weeks of collection before drawing conclusions; keep GA4 Enhanced Measurement enabled.
- 3 Connect automated reporting** **WHEN READY**
Set up GA4 Data API access so a number-filled version of this report can be generated weekly.
- 4 Grow the right channels** **ONGOING**
Once data exists: tag shared links with UTMs, prioritise SEO if organic is low, invest in the pages & forms that convert.

08 SEE THE NUMBERS NOW

Google Analytics 4

Realtime, Acquisition, Engagement, Tech & Demographics. Data from 07 Jul.

analytics.google.com → G-MMBK1FRQLY → Reports

Vercel Web Analytics

Visitors, page views, top pages, referrers, countries & devices. Data from 06 Jul.

vercel.com → project p1-website → Analytics

Automated reports (setup)

For number-filled reports: a Google Cloud service account with the GA4 Data API, added as Viewer on the property, plus the numeric Property ID.

Data-honesty note. No figures in this report were estimated or invented. Traffic numbers are intentionally omitted because collection began only on 06–07 Jul 2026 and no analytics reporting API is connected to this project. The setup status, timeline, page inventory and tracking-coverage charts above were verified directly from the live site and its source code on 09 Jul 2026.
